NOTES

1. All dimensions in millimetres. The datum symbol marks the origin: the board's lower-left corner, X right, Y up, seen from the component side.
2. Geometry is design nominal, read from the KiCad board file.
3. Hole IDs are the board's own reference designators from the KiCad file, not assigned by this drawing, and are in no positional order.
4. The title block reads "TinyTapeout 1,2,3 Demo Board", but no PCB served TT01: that was a bare-die trial run.
5. This sheet covers revisions 2.2.5 and 2.2.6: the same board mechanically, compared feature by feature before merging. Only the electrical design and the shuttle differ.
6. The Pmod host headers along the lower edge are what a mounting plate registers against. Their 22.86 mm (0.9 in) pitch, per the Digilent Pmod Interface Specification 1.2.0, is the same on every revision; their distance from the lower edge and their position along it are not.
7. Port names differ by family: JA, JB, JC on the adapter and Raspberry Pi sheets, by signal direction on the demo boards, PMOD 1 to 3 on the plate sheets. TT-MP-02 maps them.
8. Board thickness is 1.6 mm nominal. The KiCad file's 1.60000 mm is its stackup sum, not a specified finished thickness.

NOTES (continued)

9. Assembled envelope, connector overhang included, is 104.50 x 82.25 mm against a 104.50 x 81.00 mm board outline. The FEATURE SCHEDULE gives the extents.
10. GENERAL TOLERANCE in the title block is a normal board-house figure, not one any source here states.
11. Generated from the listed sources and not checked by a second party: there is no CHECKED field because nobody has signed it.
