

HOLE SCHEDULE

FEATURE SCHEDULE

LEGEND

NOTES

1. All dimensions in millimetres. The datum symbol marks the origin: the lower-left corner of the board outline, X right, Y up, viewed from the component side.
2. Geometry is design nominal, read from the KiCad board file.
3. Hole IDs are the board's own reference designators from the KiCad file, not assigned by this drawing, and are in no positional order.
4. No other demo board revision shares this geometry.
5. Pmod host headers are on a 22.86 mm (0.9 in) pitch, per the Digilent Pmod Interface Specification 1.2.0.
6. The Pmod host headers along the lower edge are what a mounting plate registers against. Their 22.86 mm pitch is the same on every revision; their distance from the lower edge and their position along it are not.
7. The chain-double-dot rectangle at each Pmod host is the connector body where it overhangs the board edge. Not a board feature: it is what a peripheral and a bracket must clear.
8. Pmod host coordinates are given to three decimals, unlike the rest of this sheet. Rounded to two, adjacent hosts print 22.85 apart and contradict the 22.86 pitch dimensioned here.

NOTES (continued)

9. Port names differ by family: JA, JB, JC on the adapter and Raspberry Pi sheets, by signal direction on the demo boards, PMOD 1 to 3 on the plate sheets. TT-MP-02 maps them.
 10. Board thickness is 1.6 mm nominal. The KiCad file's 1.56100 mm is its stackup sum, not a specified finished thickness.
 11. Assembled envelope, connector overhang included, is 85.00 x 86.65 mm against a 85.00 x 85.00 mm board outline. The FEATURE SCHEDULE gives the extents.
 12. Feature numbers are fixed across this family, so a number means the same part on every sheet. This board has no number 6, so the schedule skips it.
 13. GENERAL TOLERANCE in the title block is a normal board-house figure, not one any source here states.
 14. Generated from the listed sources and not checked by a second party: there is no CHECKED field because nobody has signed it.
